

NOTES TO USERS

This map is for use in administering the National Flood Insurance Program. It does not show all flood hazards or areas or details of flooding directly from that drainage source of any area. The community map preparer should be consulted for possible updated or additional flood hazard information.

To obtain more detailed information in areas where Base Flood Elevation (BFE) studies have been completed, users are encouraged to consult the FIRM panel notes. In addition, the National Flood Insurance Program Study (NFIS) report that accompanies this FIRM. Users should be aware that BFEs shown on this FIRM do not reflect what is actually occurring. These BFEs are the original insurance rates and numbers used by NFIS as the sole source of flood elevation information. Accordingly, these elevation values are not necessarily current. Accordingly, these elevation values are not necessarily current.

Calculated Base Flood Elevation (BFE) shown on this map apply only landward of 0.07 North American Vertical Datum (NAVD88) levels of this FIRM. It should be noted that coastal roads described may also be protected in the Survey. These areas are not shown on this map. For more information regarding this community, elevations shown in the Summary of Selected Elevation table should be used for construction, project floodplain management purposes when they apply to the area.

Boundaries of the floodplains were compiled by census sections and intercensal between census boundaries. The floodplains were based on hydraulic computations, with regard to requirements of the National Flood Insurance Program. Floodway boundaries and other floodway data are reported in the Flood Insurance Study report for this jurisdiction.

Certain areas not in Special Flood Hazard Areas may be protected by flood control structures. Refer to Section 2.4 "Flood Protection Measures" of the Flood Insurance Study report for information on flood control structures in this community.

The computation used in the preparation of this map is Universal Transverse Mercator (UTM) zone 12. The horizontal datum is NAVD88. GRS-1980 spherical differences in height, horizontal projection at UTM zones used in the computation, are less than 1 foot. The vertical datum is NAVD88. GRS-1980 differences in map features across jurisdiction boundaries. These differences do not affect the accuracy of the FIRM.

Flood elevations on this map are referenced to the North American Vertical Datum of 1988. These flood elevations must be compared to structure and ground elevations to determine if any specific structure is subject to flooding. For more information on the relationship between the National Vertical Datum of 1988 and the North American Vertical Datum of 1988, visit the National Geodetic Survey's Vertical datum page or contact the National Geodetic Survey at the following address:

Flood Reference Systems Division

1215 East Main Highway
Silver Spring, Maryland 20910
(301) 777-3242

To obtain more information, description, and location information for flood maps shown on this map, please contact the Information Services Branch of the National Geodetic Survey at 13011 719-3242, or visit their website at www.ngdc.noaa.gov.

Digital map information shown on this FIRM was prepared in digital format by Summit County Planning Division.

Geographic details shown on this map are based on the best data available at the time of publication; therefore changes due to annexations or consolidations may have occurred after this map was published. Map users should contact appropriate community officials to verify current corporate limit boundaries.

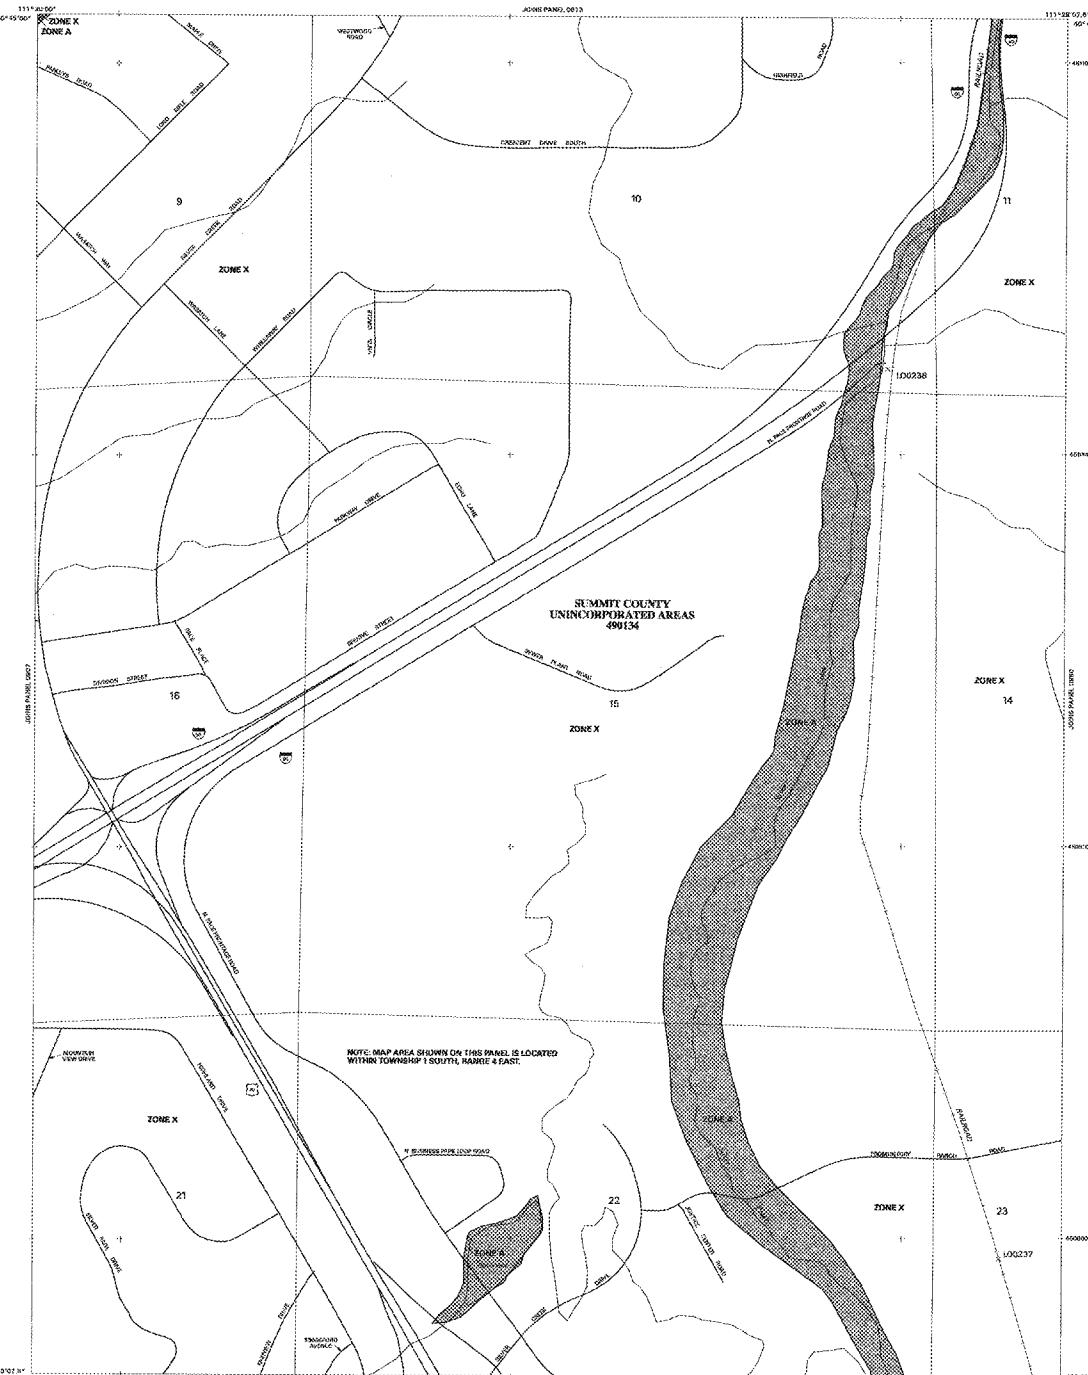

Please refer to the accompanying printed Map Index for an overview map of the community. A copy of the printed map can be obtained by contacting your congressional representative or by calling the National Flood Insurance Program Data Center for each community as well as a listing of the panel on which each community is located.

An accompanying Flood Insurance Study report, Letters of Map Revision or Letters of Map Amendment relating to this panel, and digital version of the FIRM panel may be available. Contact the FEMA Map Service Center at the following address and Internet address for information on all revised products available from FEMA:

Phone: 800-236-9510
Fax: 800-338-8620
www.fmsc.fema.gov

If you have questions about this panel or information concerning the National Flood Insurance Program, please call 1-877-FEMA-RISK (1-877-336-7475) or visit the FEMA website at www.fema.gov.

This map reflects more detailed and up-to-date stream channel configurations than those shown in the previous panel for this jurisdiction. The floodways and floodplains that were transferred from the previous FIRM may have been added to the new panel. If there is any question as to the location of a stream, as a result, the Flood Profiles and Roadway Data tables in the Flood Insurance Study report may reflect stream channel distances that differ from what is shown on this map.

LEGEND

	SPECIAL FLOOD HAZARD AREA SUBJECT TO INUNDATION BY THE 1% ANNUAL CHANCE FLOOD EVENT
	The 1% annual chance flood (100-year flood) is the flood that has a 1% chance of being equaled or exceeded in any given year. This Special Flood Hazard Area includes Zones A, AE, AG, AR, AR8, V, and VE. The base flood elevation for this area is the 1% annual chance flood.
	No base flood elevation determined.
	Base depth of 1 to 3 feet (moderate areas of flooding); base flood elevation determined.
	Base depth of 3 to 5 feet (moderate areas of flooding); base flood elevation determined.
	Area of special flood hazard formed from the 1% annual chance flood event by a flood control project that has subsequently been removed or modified. The base flood elevation for this area is the 1% annual chance flood elevation determined from the 1% annual chance flood event.
	Area to be protected from 1% annual chance flood events by a Federal Flood Protection System under construction; base flood elevation determined.
	Coastal flood zones with relatively minor effects on base flood elevation determined.
	Coastal flood zone with relatively minor effects on base flood elevation determined.
	FLOODWAY AREAS IN ZONE AE
	The boundary is the junction of a stream plus any adjacent floodplain areas that must be flood protected to reduce the 1% annual chance flood risk to negligible levels.
	OTHER AREAS
	Area of 0.5% annual chance flood, greater than 0.5% annual chance flood, average depth of less than 1 foot or with drainage areas less than 1 square mile and areas inundated by floods from 1% annual chance flood events.
	OTHER AREAS
	Area determined to reduce the 0.5% annual chance flood risk.
	Area in which flood hazards are uncontrolled but possible.
	COASTAL BARRIER RESOURCES SYSTEM (CBRS) AREAS
	OPAD areas are normally located within or adjacent to Special Flood Hazard Areas.
	Boundary Special Flood Hazard Area of different Base Flood Elevations. Flood depths are indicated.
	Base Flood Elevation line and value indicated in feet*
	New Base Flood Elevation value when within 2000 feet distance from old value indicated in feet*
